### REC\_DS using C\_Week 2\_COD\_Question 5

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

Ashwin is tasked with developing a simple application to manage a list of items in a shop inventory using a doubly linked list. Each item in the inventory has a unique identification number. The application should allow users to perform the following operations:

Create a List of Items: Initialize the inventory with a given number of items. Each item will be assigned a unique number provided by the user and insert the elements at end of the list.

Delete an Item: Remove an item from the inventory at a specific position.

Display the Inventory: Show the list of items before and after deletion.

If the position provided for deletion is invalid (e.g., out of range), it should

display an error message.

### ***Input Format***

The first line contains an integer  $n$ , representing the number of items to be initially entered into the inventory.

The second line contains  $n$  integers, each representing the unique identification number of an item separated by spaces.

The third line contains an integer  $p$ , representing the position of the item to be deleted from the inventory.

### ***Output Format***

The first line of output prints "Data entered in the list:" followed by the data values of each node in the doubly linked list before deletion.

If  $p$  is an invalid position, the output prints "Invalid position. Try again."

If  $p$  is a valid position, the output prints "After deletion the new list:" followed by the data values of each node in the doubly linked list after deletion.

Refer to the sample output for the formatting specifications.

### ***Sample Test Case***

Input: 4

1 2 3 4

5

Output: Data entered in the list:

node 1 : 1

node 2 : 2

node 3 : 3

node 4 : 4

Invalid position. Try again.

### ***Answer***

```
// You are using GCC
```

```
#include<stdio.h>
```

```
#include<stdlib.h>
```

```
typedef struct node{
    int data;
    struct node*prev;
    struct node*next;
}node;
```

```
node*createnode(int data){
    node*newnode=(node*)malloc(sizeof(node));
    newnode->data=data;
    newnode->prev=NULL;
    newnode->next=NULL;
    return newnode;
}
```

```
void display(node*head){
    node*temp=head;
    int nodecount=1;
    while(temp!=NULL){
        printf("node %d : %d\n",nodecount++,temp->data);
        temp=temp->next;
    }
}
```

```
int getlength(node*head){
    int count=0;
    node*temp=head;
    while(temp!=NULL){
        count++;
        temp=temp->next;
    }
    return count;
}
```

```
node*deleteatpos(node*head,int pos){
    if(pos<=0 || head==NULL){
        return head;
    }
    node*temp=head;
    int i=1;
    while(temp!=NULL && i<pos){
        temp=temp->next;
    }
}
```

```

        i++;
    }
    if(temp==NULL)
        return head;
    if(temp->prev!=NULL)
        temp->prev->next=temp->next;
    else
        head=temp->next;
    if(temp->next!=NULL)
        temp->next->prev=temp->prev;
    free(temp);
    return head;
}

```

```

int main(){
    int n,pos;
    scanf("%d",&n);
    node*head=NULL;
    node*tail=NULL;
    for(int i=0;i<n;i++){
        int val;
        scanf("%d",&val);
        node*newnode=createnode(val);
        if(head==NULL)
            head=tail=newnode;
        else
        {
            tail->next=newnode;
            newnode->prev=tail;
            tail=newnode;
        }
    }
    scanf("%d",&pos);
    printf("Data entered in the list:\n");
    display(head);
    if(pos<1 || pos>getlength(head))
        printf("Invalid position. Try again.\n");
    else{
        head=deleteatpos(head,pos);
        printf("After deletion the new list:\n");
        display(head);
    }
}

```

```
}  
return 0;  
}
```

**Status :** Correct

**Marks :** 10/10
