Roll no: 240701181 Phone: 9150394958

Branch: REC

Department: I CSE AH

Batch: 2028

Degree: B.E - CSE

## NeoColab\_REC\_CS23231\_DATA STRUCTURES

REC\_DS using C\_Week 2\_COD\_Question 2

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

#### 1. Problem Statement

Moniksha, a chess coach organizing a tournament, needs a program to manage participant IDs efficiently. The program maintains a doubly linked list of IDs and offers two functions: Append to add IDs as students register, and Print Maximum ID to identify the highest ID for administrative tasks.

This tool streamlines tournament organization, allowing Moniksha to focus on coaching her students effectively.

#### **Input Format**

The first line consists of an integer n, representing the number of participant IDs to be added.

The second line consists of n space-separated integers representing the participant IDs.

### **Output Format**

The output displays a single integer, representing the maximum participant ID.

If the list is empty, the output prints "Empty list!".

Refer to the sample output for the formatting specifications.

#### Sample Test Case

```
Input: 3
    163 137 155
    Output: 163
Answer
    // You are using GCC
     #include <stdio.h>
    #include <stdlib.h>
    typedef struct Node {
      int data;
      struct Node* prev;
      struct Node* next;
    } Node;
    typedef struct DoublyLinkedList {
      Node* head:
      Node* tail:
    } DoublyLinkedList;
    void append(DoublyLinkedList* list, int data) {
      Node* newNode = (Node*)malloc(sizeof(Node));
      newNode->data = data;
      newNode->prev = NULL;
      newNode->next = NULL;
      if (list->tail == NULL) { // If list is empty
lic.,
} else {
nst->
        list->head = list->tail = newNode:
         list->tail->next = newNode;
```

```
newNode->prev = list->tail;
         list->tail = newNode;
     int findMax(DoublyLinkedList* list) {
       if (list->head == NULL) {
          printf("Empty list!\n");
          return -1;
       }
       Node* current = list->head;
       int maxID = current->data;
       while (current != NULL) {
          if (current->data > maxID) {
            maxID = current->data;
          current = current->next;
       return maxID;
     int main() {
       DoublyLinkedList list = {NULL, NULL};
      int n, id;
       scanf("%d", &n);
       if (n < 1 || n > 20) {
          printf("Empty list!\n");
          return 0;
       for (int i = 0; i < n; i++) {
          scanf("%d", &id);
          if (id < 1 || id > 10000000) {
printf("In
return 0;
}
ar
            printf("Invalid ID!\n");
          append(&list, id);
```

```
int maxID = findMax(&list);
if (maxID != -1) (
                                                                                  240701181
                                                       240701181
       if (maxID != -1) {
         printf("%d\n", maxID);
       return 0;
    Status: Correct
                                                                           Marks: 10/10
